Ivan Gumeniuk Personal Statement

Artefact development and Group coordinator

Defining my role within the team

As the artefact developer, I consulted with my team on what type of artefact we wished to produce, providing clear methods I would use and a clear outline of my desired outcome. Researching possible AI models for helping me construct a prompt and best and most realistic yet free generative AI for videos, making sure I am aware of the pros and cons of all the possible AI, but also clear reasoning why the chosen generative AI (Sora2) stands out and is the best. The process had me iterating on possible prompts, trying each one, seeing what works, giving tweaks per prompt used, looking for feedback from group members if the output satisfies our goals, continuing to work on it if not. Additionally, due to using Sora 2, I had to research how to remove the watermark, seeing which tools do the job better and what other problems arise because of the additional tools used, such as the final watermark remover used, which removed the news ticker, which I had to get another AI to add back. Not only did I have to overcome challenges during development, but I also got out of my comfort zone when using new-to-me tools; I am now able to say I have developed a good understanding of the tools I had to use. Finally, writing in the supporting document, my work process, the iterative prompt creation and research of different AI considered, providing thorough research aiming for high marks.

As a group coordinator, I made sure everyone in my groups was clear on their roles and kept up with their work, messaging each member to check up on them and listening to their working process, sometimes giving feedback. This was especially crucial during reading week, when we didn't see each other face to face, as well as providing help if and when needed, for example, helping to write up the final supporting document, formatting, and proofreading.

My reflections

My roles had me be an active member of the group, requiring high levels of communication. I have considerably improved my communication skills within a working environment, improving my portfolio of AI models and tools that I can use, for example, Sora2, Sora watermark removers, different AI image generators, as well as deepening my knowledge of how to develop the correct prompt to produce the desired outcome. Strengthening my research skills when I had to find the perfect generative AI to use.
